General

Test Authorities, Registration Mark, Approvals

Low voltage switchgear from Benedict GmbH is built and tested to national and international specifications. All devices suit all important specifications without any test obligation, like VDE, BS and also relative to IEC Recommendations and to European Standards like IEC 947 and EN 60947.
It is for this reason of our Low voltage switchgear is used all over the world. In order to provide special versions, limitations to the max. voltages, currents and power ratings or special markings are sometimes necessary.

Quality Control System

Since November 1991 Benedict GmbH has been certified according to the quality control system **ÖNORM EN ISO 29001**. The target of the ISO-certification is, to grant the customer the quality of the performance of his supplier, who is audited in accordance with this standard.

CE-Marking CE

The manufacturer has to sign his products with the CE-Marking. With the CE-Marking the manufacturer confirms the accordance with the different EEC Directives. The CE-Marking is absolutely necessary to sell the products in the EEC.
Below you find the EEC Directives concerning our products.
Low Voltage Directive 2006/95/EC
EMC Directive 2004/108/EC
RoHS + WEEE 2002/95/EC + "002/96/EC

Explanations for choice and supply of low voltage switchgear in Canada and USA

Marking of auxiliary contacts
At several devices in UL-data are two voltages for auxiliary contacts mentioned (e. g.: 600 volts at same potential, 150 volts at different potentials). That means, if the voltage is higher than 150 volts, the control voltage applied to input terminals must be at the same potential.

Low voltage switchgear for auxiliary circuits (e. g. contactor relays, control units, auxiliary contacts in general) usually approved for "Heavy Duty" or "Standard Duty" UL and besides these marked with the admissible max. voltage or with short codes (see table).

Marking of auxiliary contacts according to CSA and UL	Max. rated values per pole Voltage V	Current Make A	 Break A	Cont. Current A	Contact Rating Code Designation
Heavy Duty (HD or HVY DTY)	AC 120 AC 240 AC 480 AC 600	60 30 15 12	6 3 1,5 1,2	10 10 10 10	A150 A300 A600 A600
	DC 125 DC 250 DC 600	2,2 1,1 0,4	2,2 1,1 0,4	10 10 10	N150 N300 N600

Discernment at UL-Standards

Recognized Component Industrial Control Equipment	**Listed Industrial Control Equipment**
UL issues yellow "Guide cards" with Guide- and File-No.	UL issues white "Guide cards" with Guide- and File-No.
Devices have permission to be marked with on the label c UL us	Devices have to be marked with the "UL-Listing Mark" c UL us
Devices as components approved for "factory wiring": devices for employment in control panels, when they are selected, mounted and wired according to the charging conditions by skilled worker.	Devices approved for "field wiring", a) devices for employment in control panels, when they are mounted and wired by skilled worker. b) devices for retail in USA
Valid UL-Standards: UL 508 "Standard for Industrial Control Equipment" (partly limited)	Valid UL-Standards: UL 508 "Standard for Industrial Control Equipment" (unlimited)

Are devices approved as "Listed Equipment" c UL us the approval is also valid for using as "Recognized Component" c UL us.

Technical Information

Degree of protection acc. to IEC 60947-1

Protection ratings are prefixed by the internationally agreed letters IP followed by two digits.

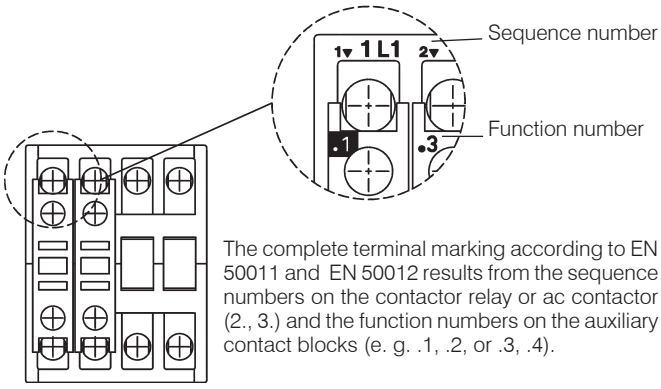
1 st digit: Pertains to solid objects
2 nd digit: Pertains to water.

1 st digit	Short description	Definition
1	Protected against solid objects greater than 50 mm	Excludes solid objects exceeding 50 mm in diameter and protects against contact with live and moving parts by a large body surface such as a hand (but not against deliberate access).
2L	Protected against solid objects greater than 12,5 mm and against contact by standard test finger	Excludes solid objects exceeding 12,5 mm in diameter and protects against contact with live and moving parts by a standard test finger or similar objects not exceeding 80 mm in length.
3	Protected against solid objects	Excludes solid objects exceeding 2,5 mm in diameter or thickness. greater than 2,5mm
4	Protected against solid objects greater than 1 mm	Excludes solid objects exceeding 1 mm in diameter or thickness.
5	Dust protected	Prevents ingress of dust in quantities and locations that would interfere with the intended operation of the equipment.
6	Dust tight	Prevents ingress of dust.

2 nd digit	Short description	Definition
1	Protected against dripping water	Dripping water (vertically falling drops) shall have no harmful effect.
2	Protected against dripping water when tilted up to 15°	Vertically dripping water shall have no harmful effect when the enclosure is tilted at any angle up to 15° from its normal position.
3	Protected against spraying water	Water falling as a spray at an angle up to 60° from the vertical shall have no harmful effect.
4	Protected against splashing water	Water splashed against the enclosure from any direction shall have no harmful effect.
5	Protected against water jets	Water protected by a nozzle against the enclosure from any direction shall have no harmful effect.
6	Protected against heavy seas	Water from heavy seas or water projected in powerful jets shall not enter the enclosure in harmful quanties.
7	Protected against the effects of immersion	Ingress of water in a harmful quantity shall not be possible when the enclosure is immersed in water under standard conditions of pressure and time.
8	Protected against submersion	No ingress of water.

Terminal markings acc. to EN50011

Auxiliary contacts of AC contactors and contacts of contactor relays and thermal overload relays are particularly marked. The terminal markings of normally-open contacts are printed as positive figures, they of normally-closed contacts as negative figures.
This gives a clear indication of the function of the contacts.
The figure below illustrates the determination of terminal markings for contactors with auxiliary contact blocks.



The complete terminal marking according to EN 50011 and EN 50012 results from the sequence numbers on the contactor relay or ac contactor (2., 3.) and the function numbers on the auxiliary contact blocks (e. g. .1, .2, or .3, .4).

Resistance to climatic conditions acc. to IEC60068

Open-type devices are climate-resistant in the constant climate according to IEC60068-2-78 (this is a climate with an ambient temperature of 40°C and an atmospheric humidity of 90 to 95%).
Enclosed devices are climate-resistant in an alternating climate according to IEC 68-2-30 (this is a moist alternating climate with a 24-hour cycle between climates with an ambient temperature of 25°C, and an atmospheric humidity of 95 to 100% and an ambient temperature of 40°C, and an atmospheric humidity of 90 to 96% in the presence of condensation during rises in temperature).
Data are valid up to an altitude of 2000m above sea level.

Short circuit protection

Back up fuses should be used to protect contactors and starters against short circuits. For starters the device with the smaller admissible fuse at the main and at the control circuit (contactor or thermal overload) determines the fuse size.
After a short circuit devices have to be checked for correct operation.
Disconnect power before proceeding with any work on the equipment!

Micro Contactors

Data according to IEC 60947-4-1, VDE 0660, EN 60947-4-1

Main Contacts		Type	**K0-05D..**	**K0-05L..**
Rated insulation voltage U_i		V AC	440 [1]	440 [1]
Making capacity I_{eff}	at U_e = 440V AC	A	65	65
Breaking capacity I_{eff} cosφ = 0,65	400V AC	A	50	50
Utilization category AC1 **Switching of resistive load**				
Rated operational current I_e (=I_{th}) at 40°C, open		**A**	**12**	**9**
Rated operational power of three-phase resistive loads 50-60Hz, cosφ = 1	230V	kW	4,7	3,5
	240V	kW	4,8	3,7
	400V	kW	8,3	3,3
	415V	kW	8,6	6,4
	440V	kW	9,0	6,8
Rated operational current I_e (=I_{th}) at 60°C, enclosed		A	8	6
Rated operational power of three-phase resistive loads 50-60Hz, cosφ = 1	230V	kW	3,1	2,3
	240V	kW	3,3	2,4
	400V	kW	5,5	4,1
	415V	kW	5,7	4,3
	440V	kW	6,0	4,5
Minimum cross-section of conductor at load with I_e (=I_{th})		mm^2	1,5	-
Utilization category AC2 and AC3 **Switching of three-phase motors**				
Rated operational current I_e open and enclosed	220V	A	6,2	6,2
	230V	A	6,2	6,2
	240V	A	5,6	5,6
	380-400V	**A**	**5**	**5**
	415-440V	A	5	5
Rated operational power of three-phase motors 50-60Hz	220-240V	kW	1,5	1,5
	380-440V	**kW**	**2,2**	2,2
Utilization category AC4 **Switching of squirrel cage motors, inching**				
Rated operational current I_e open and enclosed	220V	A	4,9	4,9
	230V	A	4,9	4,9
	240V	A	4,1	4,1
	380-400V	**A**	**3,5**	**3,5**
	415-440V	A	3,5	3,5
Rated operational power of three-phase motors 50-60Hz	220-240V	kW	1,1	1,1
	380-440V	**kW**	**1,5**	1,5
Utilization category AC5a **Switching of gas discharge lamps** Rated operational current I_e per pole at 220/230V				
Fluorescent lamps, uncompensated and serial compensated		A	6	6
parallel compensated		A	0,5	0,5
dual-connection		A	9	9
Metal halide lamps[2], uncompensated		A	6	6
parallel compensated		A	0,5	0,5
Mercury-vapour lamps[3], uncompensated		A	9	9
parallel compensated		A	0,5	0,5
Mixed light lamps[4]		A	9	9
LED-Lamps consider the inrush current of the lamp ballast and cosφ of the lamp	max. lamps per pole ($I_{nLED} \leq I_{th}$) =		inrush current of contactor / inrush current of lamp/EVG	
max inrush current of contactor		A	91	91
Utilization category AC5b **Switching of incandescent lamps**[5] Rated operational current I_e per pole at 220/230V		A	3	3

1) Suitable for: earthed-neutral systems, overvoltage category I to III, pollution degree 3 (standard-industry): U_{imp} = 4kV. Data for other conditions on request.
2) Metal halide lamps and sodium-vapour lamps (high- and low-pressure lamps)
3) High-pressure lamps
4) Blended lamps, containing a mercury high-pressure unit and a tungsten helix in a flourescent glass bulb (daylight lamps)
5) Current inrush approx. 16 x Ie

Micro Contactors

Specification: Contactors K3-..K are suitable for switching low-inductive and low loss capacitors in capacitor banks (IEC70 and 831, VDE 0560) without and with reactors.
Capacitor switching contactors are fitted with early make contacts and damping resistors, to reduce the value of make current $<70 \times I_e$.
Operating Conditions: Capacitor switching contactors are protected against contact welding for a prospective making current of $200 \times I_e$.

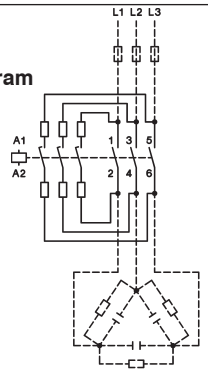
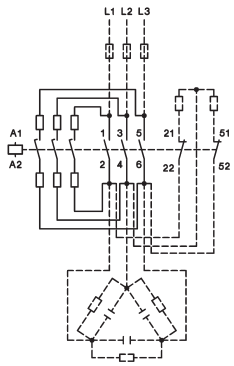
Typical Circuit Diagram



Wiring Diagram for Quick Discharge Resistors
Make sure that the current of the discharge resistors is not higher than the rated current (AC1) of the auxiliary contacts.

Mounting instructions:
In the area of capacitor switching contacts, difficulty inflammable and self-extinguishing materials shall be used only, because abnormal temperatures within the area of the resistor spirals cannot be excluded.



1) Coil voltage range and non-standard coil voltages see page 57.
2) 1 HN.. or HA.. snap-on.
3) 2HB.. for side mounting and 1 HN.. or HA.. snap-on.
4) Consider the max. thermal current of the contactor K3-74A: I_{th} 130A.
5) 2 HB.. on the left or right side and 4 HN.. or HA.. snap-on.
6) Consider the min. cross-section of conductor at max. load.
7) Type 230 for AC- and DC-operating 220-240V 50/60Hz and 220V DC (with integrated coil suppressor).
Type 230VS for AC-operating 220-240V 50Hz (with integrated coil suppressor).
8) Cable cross sections: 2,5 - 16mm².

Coil voltages for AC operated contactors

Type-suffix for coil-types K3-115/..AC
for contactor-types K3-90..AC to K3-115..AC

Suffix to contactor type	to coil type	Voltage Marking at the coil for 50Hz V	for 60Hz V	Rated Control Voltage U_s range for 50Hz min. V	max. V	for 60Hz min. V	max. V
110AC	**4.110AC**	110-122	132-146	110	122	132	146
230AC	**4.230AC**	**220-240**	**277**	**220**	**240**	**264**	**288**

Other coil voltages on request

Operating range of magnet-coils: 0,85 x U_s (min. value of rated control voltage) up to 1,1 x U_s (max. value of rated control voltage)

With reduced control voltage range 0,9 up to 1,0 x U_s at ambient temperature 60 - 90°C.

Standard voltages in bold type letters.

1) Operating range of magnet-coils: 0,85 x U_s (min. value of rated control voltage) up to 1,05 x U_s (max. value of rated control voltage).
2) Reduction of mechanical life to 10% of normal life. It is not admissible as a spare coil in a contactor for different coil voltages.

The motor F.L.C. be valid for standard internal and surface cooled three-pole motors with 1500 min^{-1}. The fuses values be valid for the motor F.L.C. shown in the table and D.O.L.-start: starting current max. 6x motor F.L.C., starting time max. 5s; star-delta-start: starting current max. 2x motor F.L.C., starting time max. 15s

For motors with higher F.L.C., higher starting current and / or longer starting time, larger short-circuit fuses are required.
The maximum admissible value is dependent on the switchgear respectively thermal overload relay.

Approximate values of motor F.L.C. according to CSA and UL

Motor rating	Motor F.L.C. at 110-120V			Motor F.L.C. at 220-240V[1)]			Motor F.L.C. at 440-480V			Motor F.L.C. at 550-600V

1) Suitable for: earthed-neutral systems, overvoltage category I to IV, pollution degree 3 (standard-industry): U_{imp} = 8kV. Data for other conditions on request
2) Total breaking time = release time + arc duration
3) Values for delay of the release time of the make contact and the make time of the break contact will be increased, if magnet coils are protected against voltage peaks (varistor, RC-unit, diode-unit)
4) with built-in coil suppressor 5) for contactors KG3-..A.. only

1) Metal halide lamps and sodium-vapour lamps (high- and low-pressure lamps)
2) High-pressure lamps
3) Blended lamps, containing a mercury high-pressure unit and a tungsten helix in a flourescent glass bulb (daylight lamps)
4) Current inrush approx. 16 x I_e
5) With central compensation pay attention to the current inrush (capacitor switching contactors)

Contactors

1) Suitable for: earthed-neutral systems, overvoltage category I to IV, pollution degree 3 (standard-industry): U_{imp} = 8kV. Data for other conditions on request
2) Total breaking time = release time + arc duration
3) Values for delay of the release time of the make contact and the make time of the break contact will be increased, if magnet coils are protected against voltage peaks (varistor, RC-unit, diode-unit)

Contactors

Data according to IEC 947-4-1, EN 60947-4-1, VDE 0660

Contact Life

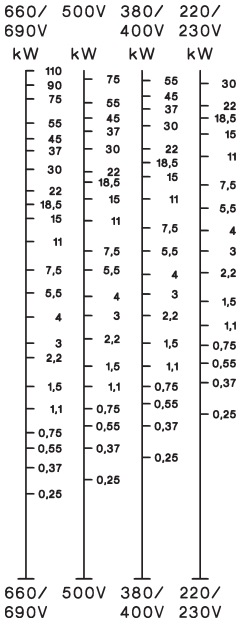
For selection of the suitable contactor-type according to supply voltage, power rating and application (utilization category AC1, AC3 or AC4) use contact life characteristic diagram.
For the most common supply voltages four scales of power ratings P_n are provided for each utilization category.
Select contactor-type according to utilization category **AC3** (breaking current $I_a = I_e$) using the **motor rating** scales to the right, according to utilization category **AC4** (breaking current $I_a = 6 \times I_e$) using the **motor rating** scales to the left. [1]
Select contactor-type according to utilization category **AC1** (breaking current $I_a = I_e$/AC1) using the **breaking current** scale. [1]

For contactors frequently used under AC3/AC4-mixed service conditions calculate contact life with the formula:

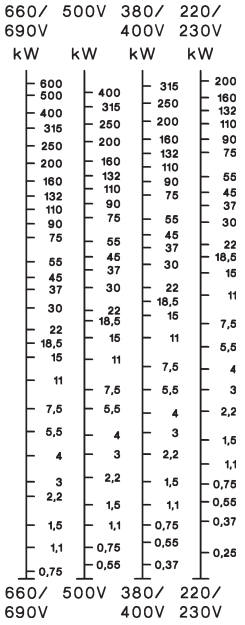
$$M = \frac{AC3}{1 + \frac{\%AC4}{100} X \left(\frac{AC3}{AC4} - 1 \right)}$$

M = Contact life (switching cycles) for AC3/AC4-mixed operations
AC3 = Contact life (switching cycles) for AC3 operations (normal switching conditions). Breaking current I_a = rated motor current I_n.
AC4 = Contact life (switching cycles) for AC4 operations (inching).
Breaking current I_a = multiples of rated motor current I_n.
%AC4 = Percents of AC4-operations related to the total cycles.

Motor Rating
P_n = AC4



Motor Rating
P_n = AC3



Breaking Current
I_a (= I_e = AC1)

Motor Rating
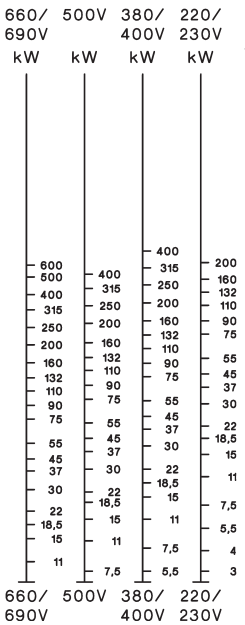
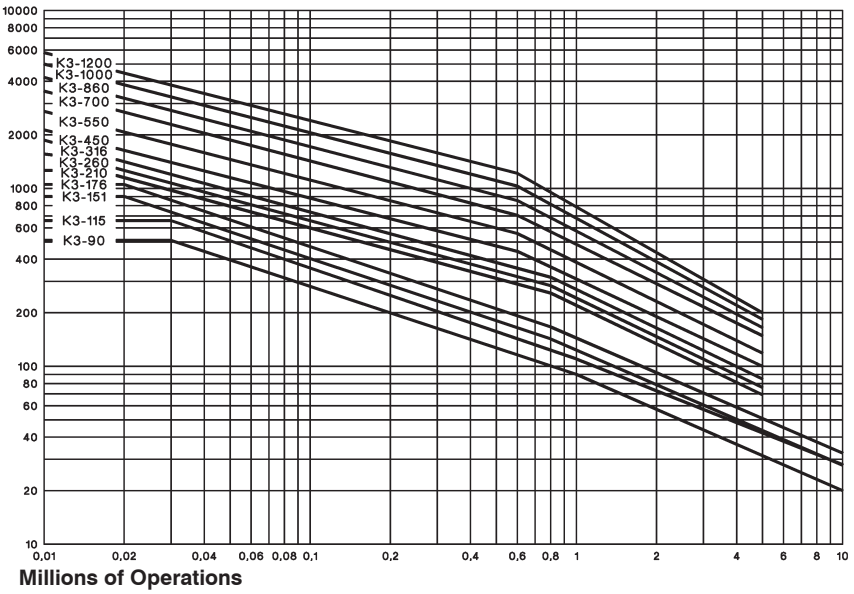
P_n = AC3



Breaking Current
I_a (= I_e = AC1)

A



Millions of Operations

1) Pay attention to the approved rated values of the selected contactor according to the national approvals.
2) Valid for NO contacts. NC contacts minus 50 %.

Contactors

Utilization Categories

For easier choice of devices and in order to make the comparison of different products simplier are utilization categories for contactors and motor-starters according to IEC 947-4-1 and VDE 0660 Part 102, for control circuit devices and switching elements according to IEC 947-5-1 and VDE 0660 Part 200 determind. The table offers different utilization categories, typical applications and assorted test conditions.

Type of current	Category	Typical applications	Rated operational current	Test conditions for the number of on-load operating cycles						Test conditions for making and breaking capacities					
				Make			Break			Make			Break		
				I/I_e	U/U_e	cosφ	I_c/I_e	U_r/U_e	cosφ	I/I_e	U/U_e	cosφ	I_c/I_e	U_r/U_e	cosφ

Star-delta starters are wired to accept thermal overload relay. The thermal overload relay has to be ordered separately. For full load current setting use the YD-dial of thermal overload relay.

Ordering Example: Star-Delta Starter, open type, rated AC3 at 400V 205A rated control voltage 230V 50Hz - **Order Type: K3Y200 230 + U85 120**

Applications

The star-delta starting method is only practicable in such cases where the motor windings are connected in delta configuration for normal operation and the torque which is needed during the starting period is not higher than approx. 30% of the rated torque. The starting current drawn from the line will be approx. 2 to 2,7 times the rated motor current.

Time setting

The transition from start (star configuration) to normal operation (delta configuration) should be after the motor achieves practically full rotational speed. The use of star-delta timer Y9A with a dwell period of approx. 25ms provides a careful operation of motor and drive equipment.

Star-Delta Starters in Special Versions

Starters for Longer Starting Time

For longer starting times the thermal overload relay is mounted on delta-contactor. The motor is not protected in Y-connection. The timer used for this starter-type is the type Y91A, time range is 10 to 60s.
Principal wiring diagram see page 104.

Ordering Example: K3Y**L**52 230

Wiring Diagrams Control Circuit

D.O.L. Starters P1 with standard coil voltages (see page 94) are supplied with connectors between main circuit and control circuit.

Coil connectors
Coils for **380-415V 50Hz** and **400-440V 60Hz**: The starter is supplied with control circuit connectors between terminals1 (L1) and 5 (L3).
Coils for **220-240V 50Hz** and **230-264V 60Hz**: The starter is supplied with control circuit connectors between terminals 95 and 5 (L3). Connect neutral wire to terminal A1.
Coils for **other voltages**: Without connectors between supply and control circuit. Connect supply to terminals A1 and 95.

Separate coil supply
Coils for **380-415V 50Hz** and **400-440V 60Hz**: Remove connectors A1-1 and 95-5, connect supply to terminals A1 and 95.
Coils for **220-240V 50Hz** and **230-264V 60Hz**: Remove connectors 95-5 connect supply to terminals A1 and 95.
Coils for **other voltages**: Connect supply to terminals A1 and 95.

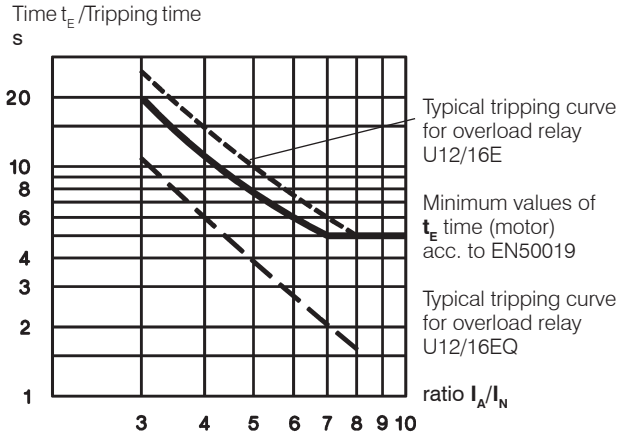
10 -	**14**	12,8	6,6	4,0	2,6	1,8	1,4

All tripping times of overload relays U12/16EQ are shorter than the minimum values of the $\mathbf{t_E}$ time for motors of protection degree EEx e acc. to EN 50019 and therefore are suitable for all motors of protection degree EEx e. For these overload relays the selection on basis of tripping curves is thereby not necessary.

When selecting a standard overload, refer to the tripping curve. Determine the values of the starting current ratio $\mathbf{I_A/I_N}$ and the time $\mathbf{t_E}$ which is marked on the label of the motor. The overload must trip within the $\mathbf{t_E}$ time, which means that the tripping curve from cold condition must be (20% due to tolerance) below the co-ordination point $\mathbf{I_A/I_N}$ and the time $\mathbf{t_E}$.
$\mathbf{I_A}$ = Starting current of motor $\mathbf{I_N}$ = Rated current of motor
$\mathbf{t_E}$ = $\mathbf{t_E}$-time of motor



Example of selection for thermal overload relay:
Technical data of a motor protection EEx e
P_N = 1,5kW I_N = 3,6A I_A/I_N = 5 t_E time = 8s

1) U12/16E 4 (2,7 - 4A)
Tripping time at 5 x I_N = 9,9s
9,9s + 20% tolerance = **11,9s >** $t_{E\ Motor}$ = **8**s
The device U12/16E 4 is **not suitable**.

2) **U12/16EQ 4** (2,7 - 4A)
Tripping time at 5 x I_N = 4,1s
4,1s + 20% tolerance = **4,9s <** $t_{E\ Motor}$ = **8**s
The device U12/16EQ 4 is therefore suitable for motor protection

Temperature Compensation

In case of higher ambient temperature use the following formula:
(Ambient temperature - 20) x 0,125 = correction factor in % of the full load motor current

Example: Ambient temperature 70°C, full load motor current 7A
(70 - 20) x 0,125 = 6,25%
Setting value: 7A + 6,25% = 7,44A

1) Suitable for: earthed-neutral systems, overvoltage category I to III, pollution degree 3 (standard-industry): U_{imp} = 4kV (at 440V), 6kV (at 690V). Data for other conditions on request.
2) Maximum cable cross-section with prepared conductor
3) Without terminals, suitable for bushing one connector 70mm² (stranded) per phase
4) Switching capacity of the start contact: AC15 300VA, max. 1,5A, DC13 (max. 220V) 30W, max. 1,5A
5) Switching capacity of the make contact: AC15 400VA, max. 1,7A, DC13 (max. 220V) 10W, max. 1A
6) U12/16E 30: Cable cross-section for main connector like type U3/42, one connector only
7) Busbar sets see accessories page 123

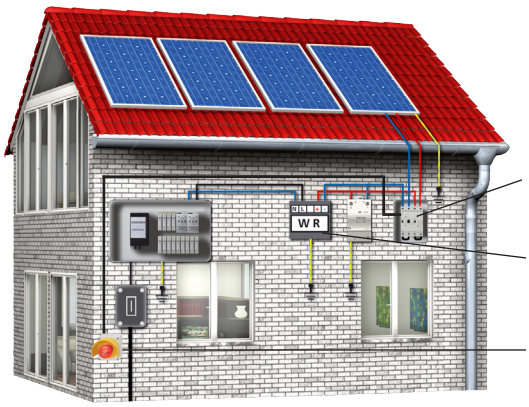
Contactors for DC-Switching for PV-installations, as remote controlled fire protection defeat device



In most Photovoltaic-installations, the switch disconnectors according to IEC 60364-7-712 are integrated in the DC/AC-inverter.
So the wires between solar-panels and inverter are continuosly under voltage.
According to ÖVE-R11-1: 2013, Photovoltaic-installations must have a fire protection defeat device.
For this purpose, BENEDICT contactors for DC-switching, used as a fire protection defeat device, can switch off the Photovoltaic-installation with a remote controlled fire brigade Emergency-Stop-button.

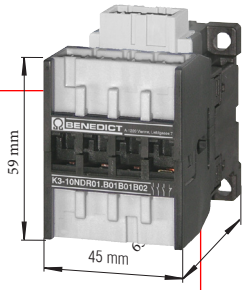
Technical Information 162

RAST 5 - exclusiv for OEM-Partner

5 mm pitch connector system

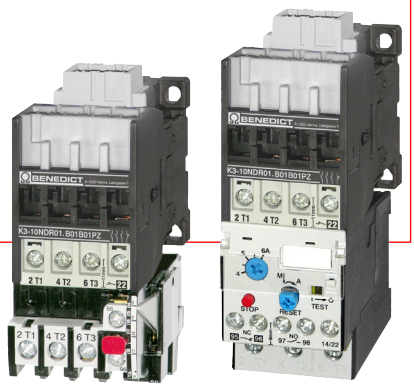


Advantages RAST 5 - Technology

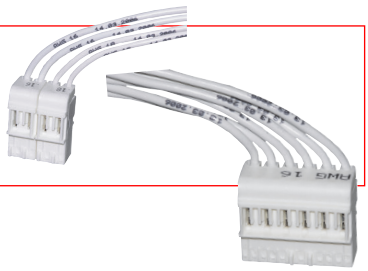
- Time saving installation
- Easy assembly without tools
- Tailor-made sockets, custom - designed codes
- Ambient temperatures up to +90°C/194°F
- Smallest sizes
- Plug technology up to 32 A / 415 V
- color coding for power ratings
- color coding for coil voltages

RAST 5 - Accessories

Combining switchgears with plug-in connections and screw connections



Contactors are available for plugs of many different producers



Contactors, RAST 5

DC-operated		S x 10^6	10	10	10	10	10
Short time current	10sec.-current	A		96	120	144	176
Power loss per pole	at I_e/AC3 400V	W		0,21	0,35	0,5	0,75
Resistance to shock acc. to IEC 68-2-27							
Shock time 20ms sine-wave	NO	g			10		
	NC	g			6		
Control Circuit							
Power consumption of coils							
AC operated	inrush	VA			33-45		
	sealed	VA			7-10		
		W			2,6-3		
DC operated	inrush	W			75		
	sealed	W			2		
Operating range of coils in multiples of control voltage U_s							
	AC operated				0,85-1,1		
	DC operated				0,8-1,1		
Switching time at control voltage U_s ±10% [2] [3]							
AC operated	make time	ms			8-16		
	release time	ms			5-13		
	arc duration	ms			10-15		
DC operated	make time	ms			8-12		
	release time	ms			8-13		
	arc duration	ms			10-15		

1) With reduced control voltage range 0,9 bis 1,0 x U_s and with reduced rated current I_e /AC1, no deratings for I_e /AC3 values.
2) Total breaking time = release time + arc duration
3) Values for delay of the release time of the make contact and the make time of the break contact will be increased, if magnet coils are protected with coil suppressor (Varistor, RC-Unit, Diode-Unit).

Data acc. to UL508
